

Attachment 1:	Job Description
Title of Position:	Senior Monitoring, Evaluation, and Learning (MEL) officer
Date of job description:	7th March 2024
Reporting to:	Senior Research Advisor
Job Summary: The Senior MEL Officer will play a critical role in implementing and managing monitoring, evaluation, and learning activities in the organization to ensure program effectiveness and impact. This position involves close collaboration with program teams to design MEL frameworks, conduct data collection and analysis, and report on findings to support continuous improvement and learning. In addition, the incumbent will support in proposal development for new business development.	
Key responsibilities: This role involves designing and executing MEL frameworks that align with program goals, and conducting systematic data collection, analysis, and reporting to assess and communicate program impacts and outcomes. This role also emphasizes enhancing decision-making and program optimization through data utilization, preparing comprehensive reports for a range of stakeholders, ensuring seamless MEL activity integration across project teams, and leading capacity-building efforts by imparting MEL best practices and tools to staff. Additionally, involvement in research to secure actionable insights and evidence for strategic program direction is a key component of the position as well as knowledge management and communication. Further, be an active member of resource mobilization for new business opportunities.	
Main tasks and responsibilities	
Strategy and Design ✓ Support the development and implementation of program strategies, ensuring adherence to ICRH-K standards through appropriate MEL systems such as standardized tools, indicators, and documentation methodologies. ✓ Lead in the design and implementation of both internal and external evaluations, including baseline and end-line surveys, as well as third-party monitoring and process evaluations. ✓ Promote learning by organizing dissemination forums and reflection sessions to analyze data for programmatic use, incorporating lessons learned into future program design and planning. ✓ Oversee the coordination of project teams for the generation of timely monthly and quarterly reports to stakeholders and donors, maintaining compliance with donor reporting requirements. ✓ Ensure the accuracy of all donor reports, playing a pivotal role in the development and revision of program frameworks, intervention strategies, and M&E systems ✓ Be on the lookout for emerging digital systems to enhance data management, analysis and visualization ✓ Enhance the capacity of data officers, clerks, program/research staff and field staff through continuous support, on-the-job training, and mentorship. ✓ Develop and lead the review of program frameworks, identifying opportunities for M&E system innovations. ✓ Support the formulation of comprehensive MEL Plans, tools, and methodologies, including survey design and data analysis, to enhance program monitoring and evaluation. Data Management and Quality Control ✓ Lead in the development and maintenance of knowledge information management systems ✓ Support in quality control and data accuracy efforts through system checks and data quality assessments ✓ Manage data indicator tracking and analysis, ensuring regular updates to key performance indicators to reflect both organizational and program-specific progress.	

- ✓ Oversee project database management, including the design of new databases for projects and studies. This includes the development/maintenance of both computer and Android-based EMR systems, as well as data capture systems like ODK and RedCAP.
- ✓ Innovate decision-making processes by developing interactive dashboards for improved data utilization.

Documentation, reporting, and learning

- ✓ Support the program and research teams in implementing a data-driven model for ICRH-K projects
- ✓ Work together with program and research officers in periodic review of program data to generate learnings, and use the learnings to inform program redesign to improve outcomes
- ✓ Lead in documentation of best practices, lessons learned, and general findings during and after project implementation
- ✓ Lead in knowledge management and communication

Proposal and abstract/manuscript development

- ✓ Contribute to the generation of abstracts for scientific conferences and manuscripts for publications in peer-reviewed journals.
- ✓ Contribute MEL expertise during the development of project and research grants as part of the business development team.
- ✓ Represent ICRHK at M and E technical working groups at county and national level

Specific Requirements

- ✓ BS/BA in a relevant field, 5+ years in M&E within health projects; master's an advantage
- ✓ Proficiency in statistical software (STATA, SPSS, SAS, R), health IT, DHIS2
- ✓ Experience in M&E plan design and implementation, and institutional M&E standards.
- ✓ Skilled in data collection, analysis, reporting, and dashboard development
- ✓ Competent in ODK, RedCAP; experienced in mobile data collection techniques.
- ✓ Knowledgeable in USAID/PEPFAR, FCDO and BMGF projects
- ✓ Verifiable experience in M&E of Sexual Reproductive Health (SRH) projects including Family planning
- ✓ Excellent in communication, scientific writing, and proposal development
- ✓ Ability to work under pressure, lead multidisciplinary teams and foster collaboration at various levels.
